Overview

Discovery Alliance, Inc. has been providing clinical trials services to the Pharmaceutical, CRO and biotechnology industries since 1996. We are a full service clinical trials management organization focused on the comprehensive, successful management and completion of Phase I-IV trials, consumer product testing and device testing within a wide range of therapeutic areas. With headquarters in Mobile, Alabama and operations in seven distinct locations, the company coordinates and manages clinical studies with experienced investigators at large physician practices and hospitals.

Clinical Research Experience

Discovery Alliance has enjoyed working with large, moderate, and small sponsors and CRO's to conduct clinical trials in the following areas:

- Analgesia
- Anesthesia
- Cardiovascular
- CNS
- Consumer Product Testing
- Epidemiology
- Infectious Diseases
- Medical Devices
- Oncology Peri/Post Operative
- Internal Medicine
- Pharmacokinetics
- Pain Management
- Outcomes Research
- Rheumatology
- Women's Health

Facility Description

The Greater Phoenix Discovery Alliance, Inc. partners with TriCity Cardiology, a 12 physician cardiology practice with a database of over 60,000 patients. Physician PI's are often recognized as high enrollers in clinical trials. Dedicated research staff work with physicians to identify, recruit and enroll appropriate patients.

Investigator Experience

Discovery Alliance, Inc. has formed partnerships with experienced and dedicated private practice physicians and physician practice groups which have been key to exceeding enrollment and quality goals.

Staff Expertise

Research Coordinators have backgrounds in nursing, pharmacy, and medical technology. All staff members participate in an initial, comprehensive 12-week training program as well as ongoing training and evaluations to assure competence. Our team is dedicated to the cause of advancing the human condition through research while providing compassionate care and going the extra mile whenever needed.

Patient Demographics

- Patients are recruited for studies from physician practices, referrals, and advertising.
- Database and chart reviews expedite screening appropriate patients
- Advertising is targeted to the medium most effective for the particular study
